EDUCATION

Computer Science (MS) - 4.0 GPA

University of California - Santa Barbara

Santa Barbara, CA

12/2024 - 12/2025

- Emphasis: Computer Vision (CV), Deep Learning (DL), Machine Learning (ML)

Computer Science (BS) + Applied Mathematics (BS) - 4.0 GPA

University of California - Santa Barbara

Santa Barbara, CA

09/2021 - 12/2024

- **Valedictorian - Class of 2025** (Rank #1 / 7460 students), Mortar Board Award recipient
- UC Education Abroad Program Fall 2023 - Universidad Carlos III de Madrid (UC3M) in Madrid, Spain
- UCSB Chess Society, UCSB Black Tide, Directed Reading Program, Coders SB, SB Hacks, Chabad, Hillel

EXPERIENCE

Google

Seattle, WA

Student Researcher - Google Beam

05/2025 - 09/2025

- Ported the camera visualization tool to a ChromeOS-based platform, redesigning the graphics stack into a zero-copy, hardware-accelerated pipeline using OpenGL, VA-API, and DRM.
- Built interactive diagnostics for hardware ML face detection, real-time triangulation, and multi-camera configuration debugging.
- Refactored the application's core logic into a more modular architecture, accelerating future feature development.

ServiceNow

Santa Clara, CA

Software Engineering Intern - AI Search

05/2024 - 09/2024

Software Engineering Intern - Developer Productivity (two summers + part-time)

05/2022 - 09/2023

- Engineered a multimodal search feature for ServiceNow AI Search, enabling text-to-image and image-to-image retrieval.
- Designed a mixed-media indexing pipeline that parsed complex documents, extracted features with Apache Tika and OpenCV, and fused CLIP embeddings from text and image chunks.
- Automated static code scan analyzer creation and deployment with a full-stack pipeline using Java, Maven, and Jenkins CI/CD, reducing turnaround time from 3 months to days.
- Supported the deployment of 1000+ developer-submitted analyzers, contributing to a top-3 internship ranking among 300+ interns for two consecutive summers.

PROJECTS

POINTER (Master's Project)

Santa Barbara, CA

UCSB Four Eyes Lab

04/2025 - 12/2025

- Built a real-time AR framework combining 6DoF pose estimation and VLMs to anchor digital content to dynamic physical objects, using an edge-to-cloud architecture that turns everyday items into interactive, tangible controllers.

Temporal Scene Simplification for Bionic Vision Prostheses

Santa Barbara, CA

UCSB Bionic Vision Lab

01/2025 - 04/2025

- Developed a deep learning scene simplification pipeline for visually impaired users, integrating saliency mapping, instance segmentation, and depth estimation to improve indoor task performance.

Semantic 3D Reconstruction from Multi-Robot Systems

Santa Barbara, CA

UCSB Four Eyes Lab

01/2025 - 04/2025

- Designed a robust 3D reconstruction approach for multi-robot drone swarms, modeling robots as a communication graph and incorporating environment noise to improve reconstruction robustness.

Mitigating Reward Hacking

Santa Barbara, CA

UCSB Robot Learning Lab

09/2024 - 12/2024

- Researched failure modes in reinforcement learning reward design and evaluated mitigation strategies to reduce exploitative agent behavior in simulated environments.

SKILLS & INTERESTS

Software: Java, Python, C++, JavaScript, HTML/CSS, SQL

Tools: PyTorch, TensorFlow/Keras, OpenCV, OpenGL, DVC, Docker, GCP, Git, CUDA, ONNX

Interests: Chess, rock climbing, backpacking, Ultimate Frisbee, volleyball, piano, guitar, reading
