EDUCATION

Computer Science (MS) - 4.0 GPA

University of California - Santa Barbara

Santa Barbara, CA

12/2024 - 12/2025

- Emphasis: Computer Vision (CV), Deep Learning (DL), Machine Learning (ML)

Computer Science (BS) + Applied Mathematics (BS) - 4.0 GPA

University of California - Santa Barbara

Santa Barbara, CA

09/2021 - 12/2024

- **Valedictorian - Class of 2025** (Rank #1 / 7460 students), Mortar Board Award recipient
- UC Education Abroad Program Fall 2023 - Universidad Carlos III de Madrid (UC3M) in Madrid, Spain

EXPERIENCE

Google

Student Researcher - Google Beam

Seattle, WA

05/2025 - 09/2025

- Redesigned the multi-camera visualization stack for Google Beam into a zero-copy, hardware-accelerated ChromeOS pipeline using OpenGL, VA-API, and DRM.
- Developed real-time diagnostics for ML face detection, 3D triangulation, camera configuration, and multi-view debugging.
- Refactored core visualization and perception-debugging logic into modular components for faster feature development.

ServiceNow

Software Engineering Intern - AI Search

Santa Clara, CA

05/2024 - 09/2024

Software Engineering Intern - Developer Productivity (two summers + part-time)

05/2022 - 09/2023

- Engineered multimodal retrieval for ServiceNow AI Search, enabling text-to-image and image-to-image search over mixed enterprise documents.
- Designed an indexing pipeline that parsed complex files, extracted visual/text features with Apache Tika and OpenCV, and fused CLIP embeddings across modalities.
- Automated Java/Maven/Jenkins CI/CD deployment for static-analysis analyzers, reducing turnaround from 3 months to days and supporting 1000+ submissions.
- Ranked top-3 among 300+ interns for two consecutive summers.

PROJECTS

POINTER: Dynamic, Object-Centered Augmented Reality [↗](#)

UCSB Four Eyes Lab

Santa Barbara, CA

04/2025 - 12/2025

- Developed an edge-to-cloud object-centric AR system using open-vocabulary detection, segmentation, 6DoF pose estimation, and VLM grounding to anchor persistent digital controls to moving physical objects.

Temporal Scene Simplification for Bionic Vision Prostheses [↗](#)

UCSB Bionic Vision Lab

Santa Barbara, CA

01/2025 - 04/2025

- Created a deep learning scene simplification pipeline for visually impaired users, integrating saliency mapping, instance segmentation, and depth estimation to improve indoor task performance.

Semantic 3D Reconstruction from Multi-Robot Systems [↗](#)

UCSB Four Eyes Lab

Santa Barbara, CA

01/2025 - 04/2025

- Built a semantic 3D reconstruction pipeline for multi-robot drone swarms, modeling inter-robot communication as a graph under noisy sensing and environments.

Mitigating Reward Hacking

UCSB Robot Learning Lab

Santa Barbara, CA

09/2024 - 12/2024

- Investigated failure modes in reinforcement learning reward design and evaluated mitigation strategies to reduce exploitative agent behavior in simulated environments.

SKILLS

Languages: Python, C++, Java, JavaScript, SQL

ML/CV: PyTorch, TensorFlow/Keras, OpenCV, CLIP, VLMs, segmentation, depth, 6DoF pose, 3D reconstruction

Systems: OpenGL, CUDA, ONNX, Docker, GCP, DVC, Git, CI/CD

Interests: Rock climbing, backpacking, piano, guitar, historical fiction, chess
